

CLASS 4 - Home Learning for w/c 16.03.20

Mathematics:

- Our focus in class for this week is algebra. To access some booklets to try, please search on Twinkl (as listed in our resource section). You may also find the links to bbc revisewise very useful if you need a little extra help.

Year 6 pupils continue to also master your long multiplication and division methods please.

English:

- Write a set of detailed instructions for your own card game. Then try it out on someone. Have they fully understood the rules and how the game should be played? Collect their feedback, then edit and improve your instructional writing.

Science:

- Design a poster to display in school about keeping hands clean and keeping microbes at bay. Try to include a slogan of some kind so your message is clear and easy to remember, for example: Don't let the germs win, throw your used tissue in the bin!

Art:

- Research the internet for examples of paintings by Claude Monet. As part of our rivers and streams topic, have a go at reproducing one of his many paintings.

Other learning:

- Complete a coding activity of your choice on code.org
- Make a Mother's Day card with a short poem inside.
