

Class 1 Maths

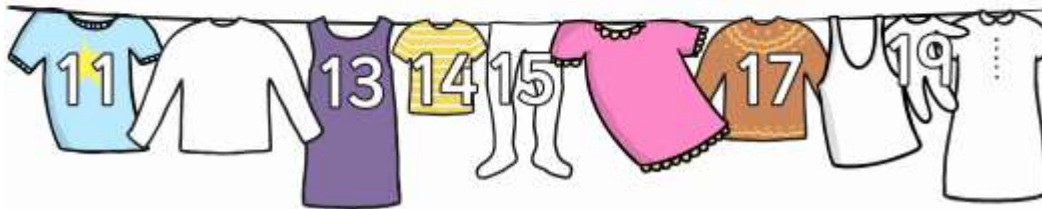

Wednesday 24th February 2021

Today we are recapping on the order of numbers to help us remember that they always follow in the same sequence.

Warm up activity: Play one more, one less. Show the children a number on your fingers and ask them to show you the same, then one more and one less.

Learning activity: Using the washing line, order the numbers with the children from 0-10. Remove one of the numbers and ask the children to tell you which one is missing.

If you are feeling confident in ordering numbers to 10, try and order numbers to 20 and identify which one is missing?

Extra activity:

Either cut out these number cards or make your own. Ask an adult to jumble the order and then reorder them correctly or can the adult remove one or two cards. Which ones are missing?

Order numerals 1-10

Ask a helper to change something on your number line.

Can you spot the mistake and correct it?
