Learning activity

We are going to be looking at how we measure things. Have a selection of different items of differing size (e.g.pencil, glue stick, water bottle, beaker). Put two items alongside each other and ask the children to describe their height. Model the sentence "the ...is taller than the....., theis shorter than the...". Correct the children if they use bigger and smaller into using this mathematical language.

Challenge: Can they roll a dice and build a tower that is the number of blocks tall as the number they roll on their dice? Roll the dice again and build another tower. Once built, ask the children to compare their towers. Which one is taller? Which one is shorter? Can they order the towers from tallest to shortest?

Repeat.
