O LO: Can I start to understand more about how Palaeontologists identify different dinosaurs from fossils by recognising and describing the family groups of dinosaurs?

Use the table below and the website links on the PowerPoint to start researching the names of more dinosaurs that are part of the Ornithischian (bird-hipped) family and the Saurischian (lizard hipped) family.

Ornithischian (bird-hipped)	Saurischian (lizard hipped)

Can you then find out more information about the dinosaurs within these groups? For example, are all of the dinosaurs in these groups' carnivores (meat eaters), herbivores (plant eaters) or omnivores (meat and plant eaters)? See how many facts you can find out about each dinosaur family above. You can make bullet pointed notes about these on the back of this page.
